RE: Chemlease® 258 raw material change

Dear Valued Customer or Distributor:

In recent weeks, it was identified that a raw material present in the Chemlease® 258R will no longer be available. As a result, we have qualified a suitable replacement and the conversion to this raw material will be effective December 31, 2020. While the raw material is minor in scope, it does require a safety data sheet change. The only noticeable difference is that the new version has an off-white color where the original has a tan color.

Please know that Chem-Trend has extensively tested this raw material replacement in the field with customers, and in our laboratories, to ensure the same quality and supply you have learned to expect. We have samples for you to evaluate under the experimental name of Chemlease® 5612W, and the experimental name for the replacement product will become Chemlease® 258R on January 1, 2021.

On behalf of all of us at Chem-Trend, I want to thank you for your cooperation in this manner and for your continued support. If you have any questions regarding this announcement, please contact your local Chem-Trend Sales Representative for more information.

Sincerely,

CHEM-TREND LIMITED PARTNERSHIP
